

Cleaning and maintenance

Basmat aluminium profiles are **passivated**, giving them a matt finish. This finish **protects** them against dirt and moisture.

It is not necessary to **lift up** the mat to clean it. Basmat must be cleaned with a **vacuum cleaner**. In the case of staining, normal cleaning products can be used. Basmat finishing strips can be replaced **easily**.

Similar products from other manufacturers must be **picked up or removed** to clean them, but this task is not made due to the weight and size of the mats. A surface cleaning is usually made and the **dirt stays in the mat well**. Basmat helps to save **time and maintenance costs**.
